PHISHING

Phishing detected. Risk scale: under 30 safe, 30 to 64 suspicious, 65 and above phishing.

WHERE THE RISK COMES FROM

Pressure 30% Deception 14% Link risk 51%

Context 5%

WHY THIS SCORE

4 of 9 wording checks and 4 link flags triggered.

Urgent language (urgent, immediately) +22

Pressure to act before you think.

Threat of account loss (blocked) +22

Fear is a common phishing lever.

Asks you to verify or log in

(verify, kyc, login)
Real banks rarely ask this by SMS or email.

+20

Financial context (bank)
Money topics build false trust.

+8

LINK CHECK

sbi-kyc-update.xyz

+12 · Not encrypted (http, not https)
+20 · Uncommon ending (.xyz) common in scams
+12 · Many hyphens in the domain
+30 · Mimics SBI but is not its official domain

MARKED IN YOUR MESSAGE

URGENT! Your SBI **bank** account will be **blocked** today. **Verify** your **KYC** **immediately**: **http://sbi-kyc-update.xyz/login**

Recommendation

Do not click or reply, and never share codes.
Verify via the official app, then report and delete it.

Copy report | Print

How it works

Five steps from a doubtful message to a clear decision.

01

Input

Paste the SMS, email text or URL exactly as received.

02

Analyze

Text and links are split apart and cleaned for inspection.

03

Detect

Pressure, threats, bait, requests and link tricks each add weighted points.

04

Explain

Every point is shown with the exact words that caused it.

05

Protect

You get a verdict and a safe next step before you click.

IF YOU ALREADY CLICKED OR REPLIED

1. Stop. Do not enter any more details or codes.
2. Call your bank on the number printed on your card. Block the card or UPI ID if money moved.
3. Change the password of any account you typed in, and any other where you reuse it.
4. Report it on **cybercrime.gov.in** or call the National Cybercrime Helpline **1930** quickly; early reports improve the chance of freezing money.
5. Keep screenshots of the message, link and payment details.

Questions

- ▶ Is my message uploaded anywhere?
- ▶ Why does it say "Low risk" instead of "Safe"?
- ▶ Can it be wrong?

CyberShield is a screening aid that scores wording and link structure with weighted rules. It cannot guarantee a message is safe; when unsure, open the official app or website yourself.
